The Spot Healing Brush is designed to correct small areas of an image by selecting pixels, either within or outside a defined area, and applying them to a destination area. The Draw tool allows you to create, edit, and save custom shapes that can be used throughout Photoshop. The Eraser tool enables you to gently erase areas of an image. The Spot Healing Brush tool helps you to correct small areas of an image that have some damage. The Paint Bucket tool allows you to fill an area with color. The Clone Stamp tool can help you to copy pixels from one area of an image to another. The Smart Brush tool enables you to save a brush set for future use. The Blur tool enables you to give an image a soft, blurry appearance. Blur is often used in image retouching, but it can also be used for adding visual interest to a photo. The Eraser tool enables you to gently erase areas of an image. The Magic Wand tool helps you to select similar colors in an image. The Heal tool allows you to repair areas of a photo that have been damaged. The Selection Brush tool can be used to select a range of pixels, such as the entire page or a specific layer. The Clone Stamp can help you to copy pixels from one area of an image to another. The Clone Stamp is useful in restoring images that have been damaged. The Gradient tool enables you to create a pattern that fades from one color to another. The Gradient tool is useful in painting or retouching an image. The Healing Brush is a useful tool that can be used to repair torn, smudged, or out-of-focus areas of an image. The Selection Brush tool allows you to select a range of pixels, such as a layer or the entire photo. In many instances, it's best to start with a basic, common-sense approach and then to consult a professional when you start seeing results that you're not getting. Adobe® Photoshop® Pro CS6 is a comprehensive tool that enables you to create, edit, and share digital images and illustrations. With the help of its intuitive tools and extensive library of image-editing features, you can take your creative projects to the next level. Q: How to execute a.NET AsyncOperation using Javascript I'm writing a.NET framework 3.5 desktop browser application using GWT and AJAX and I'm currently trying to make the underlying request asynchronous. This is a simple web service (not MVC) that uses a single form to submit multiple unique parameters, and I'd like to use an AsyncOperation to keep the form from submitting until everything is finished. I need to achieve this in JavaScript, but I'm pretty lost when it comes to calling C# methods using JavaScript. I know how to pass parameters to my method, but I don't know what that method will return. From there, I don't know how to make my WebService.Submit() call wait until the operation is done. How can I make it so that the following Javascript code will wait until the AsyncOperation is completed? var myOperation = new AsyncOperation(() => { var stuff = myService.PostMyParameters(params); if(stuff.success) success(); else fail(); }); var params = {parameters}; //list of parameters myService
